## *From the Desk of Tom Kimmel*

Dear customers and potential customers,

Here are my thoughts on the nursery business. Last year we worried about the predicted recession and then got worn out from worrying and then worn out from shipping so many plants that we ran short on a few of them. It was a very good year. This year, instead of worrying, we are going to produce all year at full speed now that we have figured out that we are no good at predicting the future and quite good at making plants.

Our business is based on serving the landscape business, however, recently and with the hiring of competent help we are getting the perennial containers trimmed and spaced such that they look good enough for the retail trade. We like landscapers as our business base because shipping is spaced out all year round—we can now handle some garden center business and would like to be considered for that. And we like to do custom grows for the larger commercial jobs.

For those who have their own trucks and think they can own and drive them cheaper than we can, you are welcome to come here and pick up—we will help load and happily take your money. Otherwise, we provide reliable delivery within a six hour radius with weekly forays out to Lincoln, Nebraska. For less quantities than will fill a truck to a given area we ship on disposable wooden racks bolted to pallets by FedEx, which appears to be a reasonably efficient way of doing things. Please remember that the light racks do not do well when loaded with two gallon pots and go over bumpy roads.

We are proud of our trained, skilled, reliable work force which is important as we are a labor-intensive business. We produce the plants by taking and sticking cuttings, transplanting small plants into larger sized pots, growing them, and then shipping them. It is all labor and no one believes me that I pay our workers out of the goodness of my heart. The market determines the cost of labor; we meet it, and not begrudgingly. Hence, the increase in prices this year to match the rate of inflation.

We are isolated out here in rural Michigan. Therefore, we appreciate any information on which plants to grow for the trade. We are busily guessing as much as we can—the trying can only go so far—it is solid customer demand that we need to know and thank you for assisting. This is our 56th year and so we must be doing something about right. Mostly we want to reassure those who are out there working hard that we are continuously trying and thinking and sometimes worrying.

As I closed this message last year: “It is those who dig the holes and put the plants in the ground who make this business run.” We thank you, and keep on doing it.

*Tom Kimmel*

## Groundcovers

### RECOMMENDED PLANT SPACING:

| <u>Spacing</u> | <u>Common plant sizes</u>  | <u>Square feet per<br/>plant</u> |
|----------------|----------------------------|----------------------------------|
| 6" centers     | 32ct.                      | .25 sq. ft.                      |
| 8" centers     | 32ct.                      | .44 sq. ft.                      |
| 10" centers    | 32ct., 24ct., 18ct.        | .69 sq. ft.                      |
| 12" centers    | 32ct., 24ct., 18ct., 10ct. | 1.00 sq. ft.                     |
| 15" centers    | 18 ct., 10ct.              | 1.56 sq. ft.                     |
| 18" centers    | #1 container               | 2.25 sq. ft.                     |
| 24" centers    | #1 container               | 4.00 sq. ft.                     |

Generally, groundcover plants are spaced 6-12" apart. The distance between the plants is based on the size of the plants used, the expected growth rate, and the budget that the installer has to work with.

$$\text{sq. ft. of job} \div \text{sq. ft. per plant} = \text{number of plants required}$$

*Example: 1,000 square feet using 32ct flats planted on 6" centers*

$$1,000 \text{ sq. ft.} \div .25 = 4,000 \text{ plants}$$

$$4,000 \text{ plants} \div 32 = 125 \text{ flats}$$

Acorus

Zone 5-9

Golden Sweet Flag, Japanese Sweet Flag

**Acorus makes an excellent groundcover. It grows well in some shade, loves edges of woods and ponds, and can even grow in several inches of water.**

|                  |                   |       |         |
|------------------|-------------------|-------|---------|
| gramineus 'Ogon' | yellow            | 6-12" | Jun-Jul |
| 38ct.....        | 1.42 (53.96/flat) |       |         |

Ajuga

Zone Varies

Bugleweed, Dwarf Bugleweed

**Forms a dense mat that covers a large area quickly. The flower spikes contain numerous bugle-shaped flowers that are bluish-purple. Needs at least moderate moisture.**

*Foliage*

|                                      |                      |      |    |         |
|--------------------------------------|----------------------|------|----|---------|
| 'Chocolate Chip'                     | chocolate            | 2-4" | Z4 | May-Jun |

**Carex - See Grasses Section**

*Carexes*, commonly called Sedges, are becoming increasingly popular as groundcovers and lawn alternatives. Twixwood offers many of these grass-like plants. See our [Grasses Section](#) for the complete list.

**Ceratostigma****Zone 5-9**

Plumbago, Leadwort

**Intense clusters of peacock-blue flowers cover this vigorous, mat-forming, herbaceous groundcover over a long period of time. In fall, foliage turns deep mahogany while the flowers keep opening for a beautiful contrast. Best color is in full sun.**

|                   |                   |    |         |

---

**Galium** **Zone 4-8**

---

Sweet Woodruff, Bedstraw

One of the best herbaceous groundcovers for a partially shaded, moist area. Formerly classified as *Asperula odorata*. Vigorous and hardy, a myriad of small white flowers appear in May and June over lovely green foliage. Prefers a light, acidic soil.

odoratum white 6" May-Jun

---

**Leptinella** **Zone 6-10**

---

Black Brass Buttons

A miniature groundcover native to New Zealand with soft fern-like foliage which is dark bronze to black. Flowers are insignificant. Can handle moderate foot traffic.

'Platt's Black' yellow 3" Jun-Jul

10ct..... 2.56 (25.60/flat)

## Liriope Zone Varies

Lily Turf

Dense spikes of lavender flowers above foliage. Useful in borders and mass plantings. Prefers some shade, but is full-sun tolerant. 'Big Blue' and the other members of the *muscaria* species have a mounding habit, while the *spicata* species are more spreading.

### spicata (spreading)

#### Foliage Color | Flower Color

spicata green | lilac 9-18" Z4 Jul-Aug

32ct..... 1.52 (48.64/flat)

32ct Plug ..... 1.52 (48.64/flat)

10ct..... 2.94 (29.40/flat)

### muscaria (mounding)

m. 'Big Blue' green | lavender 12-18" Z6 Jul-Aug

m. 'Variegata' variegated | mauve 10-15" Z6 Jul-Aug

#1 container..... 8.35

Twixwood is re-evaluating and re-sourcing our 'Big Blue' and variegated Liriope programs. Depending on how things go, we may have some availability of liners later in the year. Availability will be limited and pricing may vary so we are not publishing them this year. Contact your customer service rep for more information. We are also trialing a new-to-us cultivar: *L. spicata* 'Silver Sunproof'. The 'Silver Sunproof' we are used to here in the USA is a *muscaria* species but this *spicata* species comes out of Europe. Stay tuned.

## Lysimachia

Zone Varies

Moneywort, Creeping Jenny

A mat-forming, creeping, herbaceous groundcover for moist to wet areas. Bright yellow foliage in full sun, lime green in shade. Does best with at least part sun. Zone 3 hardy.

nummularia 'Aurea' yellow 2" Z3 Jun-Aug

72ct..... .80 (57.60/flat)

32ct ..... 1.08 (34.56/flat)

24ct Standard ..... 1.54 (36.96/flat)

10ct..... 2.56 (25.60/flat)

'Night Light' (PP# 33,931) prefers shaded areas and can be used as an accent plant or groundcover. Not aggressive but can be trimmed as needed. Continuous, bright yellow flowers from spring until frost. Burgundy foliage will tolerate light frosts, root hardy to Zone 5.

alfredii 'Night Light' (PP# 33,931) yellow 10-12" Z5 May-Sep

#1 container..... 7.15

---

**Mazus** **Zone 4-9**

---

Mazus

**A miniature groundcover that forms a bright green, fast spreading mat which is covered with blooms in the spring. Tolerates moderate foot traffic.**

|                |        |    |     |
|----------------|--------|----|-----|

| #1 container..... | 7.15              |

For Tall, Garden *Phlox*, see the Perennials section.

Sagina

Zone 4-9

Moss, Irish Moss, Scotch Moss

A miniature groundcover with tiny white flowers. The straight species is green and often called Irish Moss. ‘Aurea’ is yellow and often called Scotch Moss. Can handle heavy foot traffic. Avoid planting in hot afternoon sun.

|            | <i>Foliage Color   Flower Color</i> |    |     |
|------------|-------------------------------------|----|-----|
| subulata   | green   white                       | 2” | May |

| <u>Sedum</u> | Native | Zone | Varies  |
|--------------|--------|------|---|
| Stonecrop    |        |      |   |

Succulent-type perennials that prefer sunny, hot areas in a loose soil with good drainage. *Sedum* are especially susceptible to variations in color, habit, height, etc. depending on growing conditions, light, temperature, etc. They may change color frequently throughout the season. For example, ‘Angelina’ can be pale yellow to green if grown in shade or over-fertilized. In the heat of the summer it will be bright golden yellow. While in the cold or if stressed with too little water it will be dark orange with red highlights.

The *Sedum* genus is so large it is being subclassified or reclassified. As these come into general use, Twixwood will note them as alternate names. Other genus or subgenus names you will see include *Hylotelephium*, *Petrosedum*, *Phedimus*, *Rhodiola*, and *Sinocrassula*.

Creeping Groundcover Varieties

SunFern™ - See Artemisia in the Perennials Section

Teucrium **Zone 5-7**

Spreading Germander 

A slow spreading, dense groundcover. Purplish-pink flowers reach 3" above foliage. 'Pride of Georgia' (PP# 33,599) is a Chicagoland Grows® introduction from a Chicago Botanic Garden seed collection trip to the Republic of Georgia. Half of the royalties benefit the Institute of Botany at the Ilia State University, The Republic of Georgia.

Thymus **Zone Varies**

Creeping Thyme 

A very tough, low-growing mat that is ideal for use between flagstones. Carpeted with brightly colored flowers in summer over aromatic green foliage. Needs full sun and a well-drained soil. The *praecox* species is hardy to at least zone 4.

|                                  |               |      |    |         |

**Vinca** **Zone 4-9**

Periwinkle, Myrtle 

**An evergreen groundcover that is hard to beat for dry, shady areas under trees. Prefers acidic soil and part shade. ‘Bowles’ is more clumping in habit and has more profuse flowering than the species. ‘Dart’s Blue’ is similar to ‘Bowles’, but seems to be more disease resistant. ‘Ralph Shugert’ has variegated foliage.**

Natives

Native plants should be an important consideration in the landscape and Twixwood has many to offer. This list should help you find them in our catalog. The list below includes natives, native selections, and cultivars of natives (sometimes called nativars). Given our broad customer base, we are including plants that are native to the Midwestern, Eastern, and Southeastern United States.

We do not have space here to go into the various “levels” of nativeness or what may be appropriate for any particular landscape. Here at Twixwood we take a broad view that covers the majority of the customers we serve. We are not native “purists.” We do not track the specific genotype or ecotype. Even on the plants we propagate from our own stock, we have been doing it for so long that we do not know where our original stock came from. We’ll be happy to answer any questions you may have and if you need something we can’t provide, we are happy to direct you to our associates in the industry who can provide it. Feel free to let us know any suggestions or critiques of our list.

Plants in the Twixwood catalog are listed alphabetically by Genus within the category (Groundcover, Grasses, or Perennials) so we will give the native Genus below along with which category it can be found in. Not all varieties or cultivars within a Genus are native but you can find more specifics in that area of description.

| Native Genus                                   | Category                    | Native Genus                                    | Category                                |

## Grasses and Grass-like Plants

### RECOMMENDED PLANT SPACING:

| <u>Spacing</u> | <u>Common plant sizes</u>  | <u>Square feet per<br/>plant</u> |
|----------------|----------------------------|----------------------------------|
| 6" centers     | 32ct.                      | .25 sq. ft.                      |
| 8" centers     | 32ct.                      | .44 sq. ft.                      |
| 10" centers    | 32ct., 24ct., 18ct.        | .69 sq. ft.                      |
| 12" centers    | 32ct., 24ct., 18ct., 10ct. | 1.00 sq. ft.                     |
| 15" centers    | 18 ct., 10ct.              | 1.56 sq. ft.                     |
| 18" centers    | #1, #2, #3 container       | 2.25 sq. ft.                     |
| 24" centers    | #1, #2, #3 container       | 4.00 sq. ft.                     |

Generally grasses are spaced 12-24" apart, sometimes farther for the larger varieties. The distance between the plants is based on the size of the plants used, the expected growth rate, and the budget that the installer has to work with.

$$\text{sq. ft. of job} \div \text{sq. ft. per plant} = \text{number of plants required}$$

*Example: 1,000 square feet using 32ct flats planted on 6" centers*

$$1,000 \text{ sq. ft.} \div .25 = 4,000 \text{ plants}$$

$$4,000 \text{ plants} \div 32 = 125 \text{ flats}$$

| <u>Acorus</u>  |                       |        | Zone 5-9  |
|--|-----------------------|--------|---|
| Golden Sweet Flag, Japanese Sweet Flag   |                       |        |   |
| <i>Acorus</i> is not a true grass, but is a grass-like plant that makes an excellent groundcover. It grows well in some shade, loves edges of woods and ponds, and can even grow in several inches of water.   |                       |        |   |
| gramineus 'Ogon'   | yellow                | 6-12"  | Jun-Jul   |
| 38ct.....  | 1.42 (53.96/flat)     |        |   |
| <u>Ammophila</u>   |                       |        | Zone 5-10   |
| Native<br>American Beach Grass, Dune Grass, Marram Grass   |                       |        |    |
| A leafy, spreading grass native to North America's sandy beaches and dunes. Commonly found around Lake Michigan. Wind and salt tolerant, but cannot withstand regular foot traffic.  |                       |        |   |
| breviligulata  | green                 | 30"    | Jul-Sep   |
| 50ct Deep .....  | 1.68 (84.00/flat)     |        |   |
| <u>Andropogon</u>  |                       |        | Zone 4-10   |
| Native<br>Big Bluestem   |                       |        |    |
| The species is a native with lush green foliage that turns a rich orange and copper-red in the fall. 'Black Hawks', (PP# 27,949) bred by Brent Horvath of Intrinsic Perennial Gardens in Chicago, features dark green foliage with purple highlights that turn almost black. |                       |        |   |

Grama Grass, Side Oats Grama, Blue Grama, Mosquito Grass 

A warm season grass that is very drought tolerant. The Side Oats Grama common name refers to the *curtipendula* species, which has oat-like seed pods that hang along one side of the stem. The *curtipendula* species is less hardy (only zone 4) and has green foliage that turns golden with hints of orange and red in fall. Flowers are purplish spikelets that turn straw color.

The *gracilis* species (commonly called Blue Grama or Mosquito grass) that Twixwood grows, originally came from the Bad River area of South Dakota as a recognized genotype. *B. gracilis* foliage is more blue in color and the seeds hang down from horizontal seed spikes at the tip of the stem, looking like hovering insects. ‘Blonde Ambition’ (PP# 22,048) is a newer cultivar with striking golden-blond seed heads. Well-drained soil is especially critical for winter survival in the North. ‘Honeycomb’ (PP#33,101) is similar but with darker seed heads and is believed to be hardier and more suitable for Northern regions.

Feather Reed Grass, Korean Reed Grass 

The *brachytricha* species (Korean Reed Grass) is a slow spreading grass with pinkish plumes.

The *x acutiflora* species are commonly called Feather Reed Grass. ‘Karl Foerster’ is noted for its very upright form and was the 2001 Perennial Plant of the Year®.

| Carex | Native | Zone Varies |
|-------|--------|-------------|
| Sedge |        |             |

Sedges are not true grasses, but are grass-like plants that are becoming increasingly popular as groundcovers, or lawn alternatives, as well as accent plants. Twixwood continues to add varieties as we find ones that perform well and for which there is a demand. There is a wide variety of shade/sunlight tolerance, hardiness zones, foliage colors, and growth habits.

*C. albicans* (White-tinged or Oak Sedge) is native to most of America east of the Rockies and usually found in dry, upland forest settings. Narrow, bright green blades form 15-20" tufts.

*C. appalachica* (Appalachian Sedge) is a native found predominantly in dry deciduous forests and clearings.

*C. bicknellii* (Prairie Sedge) so-called because it grows out in the open. Can take full sun and does better in drier situations than most other sedges. It is also one of the taller native sedges.

*C. blanda* (Common Wood Sedge) is a very versatile native able to handle both sun and shade as well as most soil types. Spreads by rhizomes so can be an aggressive Carex to fill in empty spaces.

*C. brevior* (Plains Oval Sedge) is a versatile native for sun to part shade that can take wet to dry soils. Small, green oval spikelets turn into brown, prickly seed heads. Formerly known as *Carex festucacea* var. *brevior* and also known by the common name of Shortbeak Sedge.

*C. bromoides* (Brome Hummock Sedge) is a wetland sedge that can even tolerate standing water at times. Forms dense tussocks. In full sun, the centers of these clumps may begin to thin, but this can be remedied by lifting and dividing the plant in the spring or fall. Native to Eastern North America and found mostly in the Northeast, northern Mid-Atlantic, and the Great Lakes Region.

*C. eburnea* (Bristle-Leaf Sedge) has fine, needle-shaped green foliage that gives it a delicate appearance, but it is highly adaptable to heat and drought. It handles dry conditions best with more shade. Clump forming. Native from Newfoundland to Alaska and south to Virginia and Texas.

*C. elata* 'Aurea' (Bowles' Golden Sedge) is a distinct European cultivar that has golden leaves with thin green margins. Will grow in 2-3" of water but won't tolerate drought. Best color is in full sun with continually moist soil.

*C. emoryi* (Emory's or Riverbank Sedge) is a native wetland sedge with long white seed heads that turn to brown crown-like tips over the course of blooming. It is considered endangered in New York.

Continued on Next Page

### Carex (continued)

*C. 'Evergold'* (Evergold Sedge) is a Japanese cultivar usually considered a member of the *oshimensis* species but sometimes assigned to *hachijoensis* or even *morrowii*. Narrow creamy-white to yellow cascading leaves with deep green margins. Prefers partial sun and moist soil, but will tolerate other conditions.

*C. FEATHER FALLS*<sup>TM</sup> ('ET CRX01' PP# 26,199) is a vigorous, very large *Carex* that will work in almost any location. Tolerates full sun without burning and does well in full shade as well. Clumping habit grows 12-18" tall but foliage cascades out to 3' or more. A great substitute for Liriope. Variegated foliage has a dark green center with creamy margins.

*C. flacca* (Blue or Blue-Green Sedge) is synonymous with *C. glauca* referring to the blue colored leaves. This Mediterranean species prefers moist soils, even 1-2" of standing water, but established plants can possibly even handle a bit of drought. Prefers some shade. Spreads by rhizomes over time.

*C. flacca* 'Blue Zinger' (Blue Zinger Sedge) is a cultivar selected for its striking blue foliage. Grows slightly taller than the species and is bluer in color, but otherwise similar.

*C. 'Ice Dance'* (Ice Dance Sedge) is a common variegated cultivar with dark green leaves edged with a very distinct, bright white stripe down each side. 'Ice Dance' was discovered in Japan and probably belongs to the *morrowii* species. Moderate spreader that prefers moist soil and has best color in shade. May benefit from a winter mulch in northern climates.

*C. laxiculmis* 'Hobb' (BUNNY BLUE® Sedge) grows in a dense, rounded clump of 1/2" wide blue-green leaves. Insignificant flower spikes in late spring. The species (*C. laxiculmis*) that BUNNY BLUE® was selected from is native to the rich, wooded areas of Eastern North America.

*C. muskingumensis* (Palm Sedge) a native found in areas of temporary standing water.

*C. pensylvanica* (Pennsylvania Sedge) is one of the most popular sedges, particularly as a dry shade groundcover due to its slow spreading nature. One of the few sedges that prefers well-drained soil. A Roy Diblik favorite that he says may one day replace *Pachysandra*. Native to the Northeast and as far south as Mississippi and Georgia.

*C. pensylvanica* 'Straw Hat' (PP# 29,432) was selected by Brent Horvath of Intrinsic Perennial Gardens for its very prominent yellow flowers.

*C. plantaginea* (Seersucker Sedge) has very wide foliage (1") compared to most of the other sedges we grow. It is native to the Northeastern US.

*C. RIBBON FALLS*<sup>TM</sup> ('ET CRX02' PP# 29,950) is from the same breeding program and with the same habit as *FEATHER FALLS*<sup>TM</sup> (see above), but with rich, dark, glossy green foliage.

*C. radiata* (Eastern Star or Straight-Styled Wood Sedge) is native to Eastern North America from Newfoundland to Georgia. Prefers wet to moist soils in part shade.

Continued on Next Page

**Carex (continued)**

*C. vulpinoidea* (Fox Sedge) prefers very wet soils and full sun. One of the most common native sedges. The seed heads resemble a fox's tail, but don't last long.

*C. woodii* (Pretty Sedge) has fine-textured foliage similar to *C. pensylvanica*, but forms a denser mat that is better at weed suppression. Spreads slowly by rhizomes. Prefers some shade but in trials it handled full sun better than most *Carex*. Top performing *Carex* in Mt. Cuba Center trials. Native from Ontario south into Georgia and west to Minnesota and Illinois. Most common around the Great Lakes.

**Miscanthus****Zone 5-9**

Chinese Silver Grass, Maiden Grass, Eulalia Grass, Japanese Silver Grass

*Miscanthus* have been standard ornamental grasses for many years. *Miscanthus sinensis* cultivars are generally considered hardy to Zone 5.

Many varieties can heavily self-seed which has led to *Miscanthus* being considered borderline, if not, invasive. For example, check out the study done by the Chicago Botanic Garden. Twixwood recommends substituting natives and nativars such as *Panicum* and *Schizachyrium* varieties whenever possible. BANDWIDTH and HIGH FREQUENCY have been tested and certified to have sterile seed so they are safe to plant.

**BANDWIDTH** ('NCMS2B' PP# 29,460) is a compact plant with sterile seeds. Yellow bands on green foliage similar to 'Strictus' but half the height. Rust resistant.

'Gracillimus' is the standard Maiden Grass with narrow green leaves, a silver midrib, and feathery bronze-red seed blooms that turn silver in winter.

**HIGH FREQUENCY** ('NCNS3' PP# 34,712) is tall and columnar with yellow bands on green foliage. Rust resistant and infertile.

'Little Kitten' is an extremely dwarf *Miscanthus* with narrow green leaves and silvery plumes.

'Morning Light' has narrow leaves with white variegation on the margin. Reddish flower plumes turn silvery in winter.

| Panicum      | Native | Zone 5-9  |
|--------------|--------|---|
| Switch Grass |        |   |

Switch Grasses are a native prairie staple. The *virgatum* species has green, 3' foliage with pinkish tinged flower panicles that rise to 6'. Foliage turns yellow in fall.

‘Heavy Metal’ features 3’ columnar clumps of metallic blue leaves that turn yellow in fall. Pink tinged blooms extend to 5’.

‘Northwind’ is one of the best vertical forms of Switch Grass. Leaves are olive to bluish-green and flowers are yellow. A Roy Diblik selection.

‘Prairie Dog’ (PP# 32,736) is a Brent Horvath introduction from Intrinsic Perennial Gardens. It was selected for a more reserved habit, upright like ‘Northwind’ but with coloring more like ‘Heavy Metal’ with wide blue leaves.

‘Purple Tears’ (PP# 28,518) was discovered by Piet Oudolf in his nursery in Hummelo, Netherlands. Flower spikes are soft gray with purple seed heads.

‘Shenandoah’ is one of the best red switch grasses. Blue-green foliage turns red by late June. Reddish-pink flowers turn beige as they mature.

| Fountain Grass |  |
|----------------|---|

Fountain Grasses prefer full sun and may not bloom as much in partial shade. May not be completely hardy throughout Zone 5. A vigorous, clump forming grass with bottle-brush flower plumes. The cultivars we offer are more compact than the species and have various colors of seed heads.

‘Hameln’ is the standard Fountain Grass, shorter, more compact and consistent than the species.

‘Piglet’ (PP# 19,074) is a strong introduction that stays especially short and compact from Brent Horvath of Intrinsic Perennial Gardens.

| Schizachyrium   | Native | Zone 3-9  |
|-----------------|--------|---|
| Little Bluestem |        |  |

*Schizachyrium scoparium* and cultivars were the 2022 Perennial Plant of the Year®.

Little Bluestem grasses (formerly classified as *Andropogon scoparius*) are some of the hardiest ornamental grasses. Native to the Canadian Provinces and south through the US all the way to Arizona and Florida. Clumps of slender green leaves with blue bases feature purplish-bronze flowers. Foliage turns bronze-orange in fall.

‘Blue Heaven’ (PP# 17,310) was developed by the University of Minnesota. It is slightly taller and stays upright when most others lodge\*. Blue-gray foliage turns burgundy in fall.

‘Carousel’ (PP# 20,948) is a Chicagoland Grows® introduction selected for its compact, rounded habit. Upright green stems with touches of pink. Insignificant flowers.

‘Chameleon’ (PP# 31,339) is a new, variegated cultivar with bright white and green stripes that develop a flush of pink. Has a compact habit.

‘Jazz’ is a sport of ‘The Blues’ selected by Brent Horvath of Intrinsic Perennial Gardens for its shorter form. Less prone to lodging\*. Blue foliage turns purple in fall and features purplish flowers.

‘Shining Star’ (PP# 33,433) has unique green and creamy white variegated foliage. Foliage appears blue, and in cool weather the tips of the leaves will blush pale pink and darken to deep pink with burgundy and green stripes. Flowers are held upright and resist lodging.

‘Standing Ovation’ (PP# 25,202) has wider leaves that are blue with red tips. Foliage turns reddish maroon in fall and doesn’t brown out. Seldom lodges\*.

‘The Blues’ has slender blue leaves with pinkish stems. Purplish flowers appear in August and foliage turns burgundy-red in fall.

‘Twilight Zone’ (PP# 27,432) has iridescent, silvery-mauve foliage that appears mid-summer, earlier than other cultivars. Very upright, columnar habit.

Twixwood is starting production of two new cultivars from Brent Horvath at Intrinsic Perennial Gardens. ‘Little Red Fox’ (PPAF) and ‘Sandhill’ (PPAF) may have some availability late this year.

\*Lodging is a technical term used to describe the tendency of some *Schizachyrium* to flop and lay over. This is quite natural in the species and can provide an interesting look in a prairie or mass planting but may not be what is expected in all settings. Newer cultivars are being bred to resist lodging. Lodging tends to be greater with heavy watering and high nutrient levels.

| Yellow Prairie Grass |   |
|----------------------|---|

The *Sorghastrum nutans* species is one of the four dominant native grasses to the tallgrass prairies. Golden Sunset® was selected for its upright stature, clean olive-green foliage and numerous early yellow and golden-bronze flowers. This selection remains upright and does not lodge or fall over like the species. It’s been called the “Native Karl Foerster” for its resemblance. Golden Sunset® was selected by Mary Meyers of the University of Minnesota who also selected *Schizachyrium s. Blue Heaven®* (‘MinnblueA’ PP# 17,310).

# Perennials

## RECOMMENDED PLANT SPACING:

| <u>Spacing</u> | <u>Common plant sizes</u>  | <u>Square feet per plant</u> |
|----------------|----------------------------|------------------------------|
| 6" centers     | 32ct.                      | .25 sq. ft.                  |
| 8" centers     | 32ct.                      | .44 sq. ft.                  |
| 10" centers    | 32ct., 24ct., 18ct.        | .69 sq. ft.                  |
| 12" centers    | 32ct., 24ct., 18ct., 10ct. | 1.00 sq. ft.                 |
| 15" centers    | 18 ct., 10ct.              | 1.56 sq. ft.                 |
| 18" centers    | #1, #2, #3 container       | 2.25 sq. ft.                 |
| 24" centers    | #1, #2, #3 container       | 4.00 sq. ft.                 |

Generally perennials are spaced 12-24" apart. The distance between the plants is based on the size of the plants used, the expected growth rate, and the budget that the installer has to work with.

$$\text{sq. ft. of job} \div \text{sq. ft. per plant} = \text{number of plants required}$$

*Example: 1,000 square feet using 32ct flats planted on 6" centers*

$$1,000 \text{ sq. ft.} \div .25 = 4,000 \text{ plants}$$

$$4,000 \text{ plants} \div 32 = 125 \text{ flats}$$

## Achillea Zone 3-8

Yarrow 

Fragrant, fern-like foliage with showy flower heads. Excellent for use in dried flower arrangements. Yarrow does well in hot, dry conditions. 'Peter Cottontail' (PP# 31,756) is a very showy type of *Achillea* featuring ivory white flowers reminiscent of Baby's Breath.

|                       |           |        |         |
|-----------------------|-----------|--------|---------|
| 'Moonshine'           | yellow    | 12-24" | Jun-Sep |
| 'Oertel's Rose'       | rose-pink | 12-15" | Jun-Sep |
| millefolium 'Paprika' | red       | 18-24" | Jun-Sep |

38ct..... 1.42 (53.96/flat)

#1 container..... 6.50

ptarmica 'Peter Cottontail' (PP# 31,756)      white      18-24"      Jun-Sep

#1 container..... 7.15

Other sizes can be grown upon request.

## Aconitum Zone Varies

Monkshood, Wolfsbane  

Tall stems of striking blue flowers shaped like a monk's hood. These European natives grow naturally in mountain meadows with rich, moist, but well-drained soils. *Aconitum napellus* may require staking but 'Arendsii' is one of the strongest stemmed varieties and *A. fischeri* is also strong enough on its own. *Aconitum* are poisonous if ingested and can cause skin irritation.

|                         |                    |        |    |         |
|-------------------------|--------------------|--------|----|---------|
| carmichaelii 'Arendsii' | deep blue          | 24-38" | Z3 | Sep-Oct |

| napellus                | deep purplish blue | 24-48" | Z3 | Jul-Aug |

#1 container..... 9.70

## Actaea (aka Cimicifuga) Zone 5-8

Bugbane  

A Piet Oudolf introduction from Future Plants. Dark purple foliage contrasts nicely with the white flowers. 'Queen of Sheba'® (PP# 21,727) is a hybrid between the Asian (*A. simplex*) and the American (*A. racemosa*) species. It can reach 5' tall with a 2' spread when mature. Can tolerate sun with sufficient moisture but prefers partial shade. Berries are poisonous to people and rabbits but harmless to birds and butterflies. *Actaea* were formerly in the genus *Cimicifuga*.

'Queen of Sheba'® (PP# 21,727)      blue      14-16"      Apr-May

#1 container..... 12.45

## Agastache

### Zone 5-9

Giant Hyssop, Anise Hyssop, Purple Giant Hyssop, Hummingbird Mint

**Fragrant foliage and plentiful flowers attract butterflies right through the heat of summer. Drought and heat tolerant. Needs good drainage. May have questionable hardiness in Zone 5.**

### ‘Blue Fortune’

lavender blue

24-36"

Jul-Sep

| Allium | Native | Zone | Varies |
|--------|--------|------|--------|
|--------|--------|------|--------|

Ornamental or Wild Chives/Onions/Garlic, Nodding Onion 

*A. cernuum* (Nodding Onion, hardy to Zone 4) is native to North America. Loves rocky landscapes and works well on greenroofs. Will self-seed.

'Big Beauty' (PP# 34,306) (hardy to Zone 4) is an introduction from Brent Horvath of Intrinsic Perennial Gardens noted for its extra wide foliage and robust habit. Soft pink flowers. Slightly taller than 'Summer Beauty'

'Chivette' (PP# 30,151) (hardy to Zone 4) is an introduction from Brent Horvath of Intrinsic Perennial Gardens. Its season-long kelly green foliage starts upright and relaxes as the season progresses. Lavender flowers have a dark purple stripe on each petal. Mostly sterile. Both foliage and flowers are edible.

'Millenium' (hardy at least to Zone 5) is nearly identical to 'Summer Beauty' but we have found it usually blooms a few weeks later making them excellent choices to plant together for extended bloom time. Perennial Plant of the Year® in 2018.

'Summer Beauty' (hardy at least to Zone 5) has become the standard in *Allium* plantings due to its vigorous and reliable performance. Combines nicely with 'Millenium' (see above) due to similarity, but differing bloom times for extended color.

'Windy City' (PP# 28,100) (hardy at least to Zone 5) is an introduction by Brent Horvath of Intrinsic Perennial Gardens with deeper purple blooms.

| Amsonia | Native | Zone | Varies |
|---------|--------|------|--------|
|---------|--------|------|--------|

Narrow Leaf Blue Star, Blue Star  

‘Blue Ice’ (hardy to Zone 4) is similar to the native *tabernaemontana* with willow-like leaves that are wider than the *hubrichtii* and *ciliata* species.

The *hubrichtii* and *ciliata* species (considered hardy to Zone 5) are native to the south central United States and feature fine, needle-like leaves that turn golden with hints of orange in fall.

‘Storm Cloud’ is a Proven Winners® cultivar with stems that emerge near black in the spring. Leaves are dark green with silver veins.

‘Halfway to Arkansas’, ‘Midway to Montana’, and ‘Fontana’ are Brent Horvath introductions from Intrinsic Perennial Gardens.

‘Verdant Venture’ (PP# 33,415) was developed by Jim Ault at the Chicago Botanic Garden and features lush, dark green foliage with threadlike leaves that turn golden in the fall.

All varieties are not maintained in all sizes, but these and other sizes can be grown upon request.

| Anemone | Native | Zone | Varies |
|---------|--------|------|--------|
|---------|--------|------|--------|

Windflower, Japanese Anemone, Snowdrop Windflower

Prefers rich, well-drained soil in moist, semi-shaded areas. *Anemones* are spreading perennials that make great groundcovers, especially the North American native *canadensis* species (Zone 3) and the European native *sylvestris* (Zone 4). ‘Honorine Jobert’ (Zone 4) is also known as ‘Alba’ and is sometimes sold under the species name *japonica* instead of *hybrida*. It features single white flowers. ‘Robustissima’ (Zone 4) is commonly called Grapeleaf Anemone and features single light pink flowers.

The Spring Beauty™ Series are new hybrids from AB Cultivars. Spring blooming flowers resemble those of *A. sylvestris* (one of the parents). Flowers are mostly upright, held well above the foliage.

Japanese Spikenard, Mountain Asparagus, Udo

An herbaceous perennial native to Japan, Korea, and China. Young shoots are considered a culinary delicacy in Japan and taste similar to asparagus. ‘Sun King’ is a yellow-leaved variety. Reddish-black berries are inedible but loved by the birds. ‘Sun King’ was the 2020 Perennial Plant of The Year®. Reportedly deer resistant.

**Asclepias****Native****Zone 3-9**

Butterfly Weed, Butterfly Milkweed, Swamp Milkweed

An important food source for Monarch butterflies.

*A. incarnata* is the tall pink milkweed commonly called Swamp Milkweed. 'Cinderella' is similar, but may be a bit shorter and with pinker blooms. As the common name implies, prefers moist soil, but is surprisingly tolerant of average, well-drained soils once established.

*A. sullivantii* is commonly called Prairie or Smooth Milkweed. This native prefers moist prairie areas such as river bottomlands and is similar in appearance to Common Milkweed.

*A. syriaca* (Common Milkweed) has larger blooms and smooth stems. This native grows in drier areas, is drought tolerant once established, and can spread rapidly by rhizomes.

*A. tuberosa* (Butterfly Milkweed) has bright orange flower heads in summer. The 'Gay Butterflies' cultivar is more colorful with shades of red, orange, and yellow. This species is native to the uplands, is drought tolerant once established, and can spread rapidly by rhizomes.

*A. verticillata* (Whorled Milkweed) has needle-like leaves in whorls at each node along the stem. This native also prefers drier areas and is drought tolerant.

---

**Aster - See Eurybia/Symphyotrichum**

---

**Astilbe****Zone Varies**

False Spirea

Feathery flower heads provide color from spring into summer. *Astilbe* prefer moist, semi-shady conditions and are great with hostas and ferns. The new *Astilbe* from Proven Winners® ('Dark Side of the Moon' PP# 35,461) features chocolate brown foliage for added interest all season and great contrast with the raspberry pink blooms

We have chosen to alphabetize this list by cultivar name rather than species and to abbreviate the species names: a = *arendsii*, c = *chinensis*, j = *japonica*, s = *simplicifolia*. There is often disagreement over the species name and it may be best to leave them off altogether. We have also chosen to use the English names with the German in parentheses in most cases. 'Pumila' should probably be categorized as a subvariety, not a cultivar: *A. chinensis* var. *pumila*.

**Coreopsis** **Zone Varies**

---

Lanceleaf Coreopsis, Sand Coreopsis, Threadleaf Coreopsis, Tickseed 

**Coreopsis** are excellent plants for every landscape. Tolerant of heat, humidity, and drought; they thrive in even rocky or sandy soils with good drainage. The *verticillata* species ('Moonbeam' and 'Zagreb', hardy to Zone 3) are landscape favorites featuring fine needle-like leaves and are excellent for mass plantings. The rest are usually considered less hardy (Zone 5) but are great performers for most of our customer area.

A delightful perennial for the sunny border or cutting bed. Most cultivars have small carnation-like flowers in vivid colors with a spicy fragrance. The foliage is usually gray-green to blue-gray. For best performance, provide full sun in a gritty, alkaline, fairly dry soil.

*E. tennesseensis* is maintained as field stock and can be grown upon request.

All varieties are not maintained in all sizes.

Continued on the Next Page

## Echinacea (Continued)

These patented hybrids receive a lot of marketing, so are often requested by customers. Some are unique colors or double bloomers, but they may not perform as well in the landscape as some of the native or traditional varieties. In some cases they also appear not to be as effective with pollinators. The cultivars below are the ones that stand out in our trials.

The Double Scoop™ Deluxe Series are new from Darwin Perennials, bringing the flower count and timing of the Sombrero® Series. More compact, better branching, and a higher flower count than typical double *Echinacea*.

The Kismet® Series comes from the Terra Nova Nursery breeding program. With their large, showy blooms and extended bloom time, we think they are particularly adapted to both the landscape and retail markets.

The performance of the Sombrero® Series stands out above the others in trials and in our own experience. Sombrero® Baja Burgundy (PP# 28,162) even won the first ever All American Selections (AAS) performance award for perennials in 2020 (See also *Rudbeckia* 'American Gold Rush' (PP# 28,498)).

| Ferns | Native | Zone | Varies |
|-------|--------|------|--------|
|-------|--------|------|--------|

Ferns

*Athyrium filix-femina* (Lady Fern) has lacy green leaves. Grows in tall clumps. Native.

*Athyrium* ‘Ghost’ (Ghost Lady Fern) has silver-gray foliage like Japanese Painted ferns without the burgundy.

*Athyrium nipponicum* ‘Pictum’ (Japanese Painted Fern) produces fronds that are soft silvery-gray with hints of red and maroon. Probably more accurately named *Athyrium nipponicum* var. *pictum*. May be hardy to Zone 3.

*Dryopteris erythrosora* ‘Brilliance’ (Autumn Fern). Orange, red-rose, and salmon fiddleheads turn coppery orange as they open and age to dark green. ‘Brilliance’ is noted for brighter and longer-lasting red foliage as compared to the species.

*Dryopteris marginalis* (Leatherwood Fern) is very adaptable and has evergreen foliage. Also called Marginal Wood or Marginal Shield Fern. Native.

*Matteuccia struthiopteris* (Ostrich Fern) is a popular large, vase-shaped fern with tall, erect, gracefully arching, dark green fronds. Typically 2-3’, but can reach 6’. Native.

*Onoclea sensibilis* (Sensitive Fern) is native to swampy areas of Eastern North America, but grows well in average soil as long as it doesn’t dry out. Can be aggressive in its preferred growing conditions.

*Osmunda cinnamomea* (Cinnamon Fern) has yellowish green fronds with cinnamon colored fibers at the base of the plant which are used in potting Orchids. Native.

*Polystichum acrostichoides* (Christmas Fern) is an evergreen fern with glossy fronds. Native.

|            |   |
|------------|---|
| Sneezeweed |  |
|------------|---|

Large flowers (2.5”) open red with a brown cone and develop orange and yellow streaks on the petals. Rarely grows over 30” but will benefit from staking. Often grown as a cut flower. Received the 2001 Award of Garden Merit from the Royal Horticultural Society. Blooms for about 7 weeks from early July to mid-August.

The plant is non-allergenic. The common name of Sneezeweed refers to an old-time use of the dried, powdered root for snuff.

| False Sunflower, Ox-Eye Sunflower |   |
|-----------------------------------|---|

A tall, clumping perennial with daisy-like flowers. Drought tolerant and tolerant of a variety of soil types, including clay. Does best in full sun with regular water. This native cultivar is more compact than the straight species.

‘Midnight Glow’ and ‘Network’ both have variegated foliage.

Perennials

**Helleborus****Zone Varies**

Lenten Rose, Winter Rose, Christmas Rose, Hellebore

**Evergreen foliage with leathery, rich green leaves. Branched stems hold pendant, saucer-shaped flowers. Partial sun and excellent drainage yield an extended flowering period. Hellebores (all varieties) were the 2005 Perennial Plant of the Year®.**

**The FROSTKISS® series has very vigorous, distinctly marbled foliage giving year-round interest almost as spectacular as the flowers.**

**HONEYMOON® Series**

**Heuchera****Zone Varies**

Coral Bells, Alum Root

Semi-evergreen, clump forming foliage plants. Foliage color can vary depending on sun exposure. Some do better with more shade, especially the lighter colored varieties.

The cultivars in the first groups of lower priced *Heuchera* are the standard, tried and true varieties you can count on. 'Autumn Bride' is a large, green plant similar to the *villosa* species it is bred from.

The higher priced, patented varieties have unique features. These include specialized colors, more specialized growth habits, and other desirable characteristics. They may not be as hardy or adaptable as some of the more familiar ones. However, we do not have room for descriptions that do justice to each variety so we encourage you to look them up online or ask us for more information.

| Hibiscus |  |
|----------|---|

A sturdy, woody perennial that requires moisture to thrive. Does best in full sun with rich soil, but can tolerate average soil as well. These varieties have dark foliage that contrast with the brightly colored flowers.

**Lavandula****Zone 5-9**English Lavender 

An exquisite plant for the herb garden or sunny border. Its silvery-green foliage creates a desirable accent. Prefers light soil and fairly dry conditions. 'Phenomenal' (PP#24,193) was named a "Must-Grow Perennial" by Better Homes & Gardens. Reportedly handles heat and humidity better than other varieties. May even be hardier (Zone 4). In northern climates, it typically stays shorter than sometimes advertised.

'SuperBlue' (PP# 24,929) is part of the Better Versions program from Darwin Perennials and has a proven track record of better performance in the landscape than 'Hidcote' and 'Munstead'.

Lupinus

Zone 5-8

Lupine

Tall, showy flower spikes above palmate foliage. Does best in well-ventilated areas. Good for cut flowers. An easy sell on the garden center bench.

Although Lupines are considered a perennial, they will usually die off after a few years. Some varieties are good self-seeders and if allowed to go to seed may produce new plants although they may not resemble the parent plant.

Westcountry™ series

Monarda

Zone 4-9

Bee Balm, Bergamot

Great native cultivars for the cutting, hummingbird, and butterfly gardens. Does best in a moisture-retentive, rich soil with sunny, open conditions. Several of these cultivars (generally considered hardy to Zone 4) are often sold under the species name of *didyma* in reference to the native *didyma* parentage of most of the hybrids. ‘Purple Rooster’, ‘Mojo’ (PP# 29,982), and the Bee-You® Series reportedly exhibit greater mildew resistance.

| Nepeta  | Zone Varies   |
|---------|---|
| Catmint |   |

Gray-green foliage is complimented by soft lavender-blue flowers. The taller varieties tend to fall over and spread across the ground unless staked. Trim to rejuvenate and extend flowering. ‘Walker’s Low’ was the Perennial Plant of the Year® in 2007.

There is some variation on the species names for the different varieties. ‘Walker’s Low’ and ‘Blue Wonder’ should probably be *racemosa* species, but are often sold as *faassenii*. *Faassenii* is a sterile hybrid of *racemosa* and *nepetella*, so should be designated *x faassenii* on ‘Kit Cat’.

‘Chartreuse on the Loose’ (PPAF) features bright chartreuse foliage.

Junior Walker™ (PP# 23,074) is part of the Better Versions program from Darwin Perennials. It has a proven track record of better performance in the landscape than ‘Walker’s Low’ and other varieties.

Little Trudy® (PP# 18,904) is truly a dwarf Catmint, one of the most compact and consistent we’ve seen.

The Prelude™ *Nepeta* have a mounding habit that, unlike the other varieties, stay upright and feature very large flowers that are excellent for pollinators. Foliage is larger and greener than the other varieties.

Mountain Mint

An American native and member of the mint family, *Pycnanthemum* is a tall and clump-forming perennial that spreads by rhizomes. It's an aromatic plant that blooms with dense clumps of flowers. It does best in full sun and can be drought tolerant once established. It is a larval host plant for the Gray Hairstreak Butterfly.

| Rudbeckia | Zone | Varies |
|-----------|------|--------|
|-----------|------|--------|

Black-Eyed Susan, Coneflower

One of the best perennials for long life, ease of care, disease resistance, and season-long beauty and color. The cut flowers and dried seed heads are second to none. Twixwood recommends ‘Summerblaze’. It has narrower leaves like ‘Viette’s Little Suzy’ and is more resistant to black spot (Septoria) than ‘Goldsturm’.

‘American Gold Rush’ (PP# 28,498) is a Brent Horvath introduction from Intrinsic Perennial Gardens. It has been called not only the best *Rudbeckia* but perhaps the best overall perennial. It won the first ever All American Selections (AAS) performance award for perennials in 2020 (see also *Echinacea* Baja Burgundy (PP# 28,162)). It was also the 2023 Perennial Plant of the Year®

Salvia

Zone Varies

Meadow Sage, Wood Sage

Great for sunny borders, cutting beds, and dried arrangements. The textured foliage is often aromatic. Prefers full sun in a light acidic soil. Cutting plants back halfway at the end of June improves blooming and appearance.

Wood Sage (*x sylvestris*) is the result of a cross between *nemorosa* and *pratensis*. It is sold under various synonyms including *S. x alpestris*, *S. x asperula*, *S. x collina*, and *S. x superba*.

Saponaria

Zone Varies

Soapwort

*S. intermedia* is a Mediterranean native that loves hot, dry conditions while ‘Max Frei’ is hardier and less tolerant of heat and humidity in the South. Both make great groundcovers and have masses of phlox-like pink flowers in the summer and fall.

Sedum

Zone Varies

Stonecrop

Succulent-type perennials that prefer sunny, hot areas in a loose soil with good drainage. *Sedum* are especially susceptible to variations in color, habit, height, etc. depending on growing conditions, light, temperature, etc. They may change color frequently throughout the season.

The *Sedum* genus is so large it is being subclassified or reclassified. As these come into general use, Twixwood will note them as alternate names. Other genus or subgenus names you will see include *Hylotelephium*, *Petrosedum*, *Phedimus*, *Rhodiola*, and *Sinocrassula*.

| <b>Solidaster</b> | <b>Zone 5-8</b> |
|-------------------|-----------------|

|           |   |
|-----------|---|
| Goldenrod |  |
|-----------|---|

Large clusters of tiny pale lemon yellow flowers. Great for use as a cut flower and dried flower arrangements. A great pollinator plant.

Sometimes sold as genus *Solidago* this species is a 1920 cross between *Aster ptarmicoides* and *Solidago canadensis* from the Leonard Lille Nursery in Lyon, France. The *Aster* genes give it a more compact and controlled habit. The *Solidago* genes give it a golden color and profuse flowers.

|                    |   |
|--------------------|---|
| Lamb’s Ear, Betony |  |
|--------------------|---|

Twixwood grows two quite different forms of the genus *Stachys*, each represented by different common names.

Lamb’s Ear forms a clump of large fuzzy leaves and rarely flowers in the landscape. ‘Helene von Stein’, sometimes called ‘Big Ears’, belongs to this type.

Betony forms a clump of glossy green foliage and flowers profusely. Sometimes classified as *S. betonica* or *Betonica officinalis*. ‘Hummelo’ and Brent Horvath’s two introductions from Intrinsic Perennial Gardens, ‘Summer Crush’ (PP# 29,899) and ‘Summer Romance’ (PP# 30,243) belong to this type. *Stachys* ‘Hummelo’ was the 2019 Perennial Plant of the Year®.

Both types of *Stachys* make excellent groundcovers in mass plantings.

## Thalictrum Zone Varies

Meadow Rue 

Meadow Rue's are typically fairly tall plants with foliage similar to *Aquilegia* (Columbine). The height makes them great architectural plants for the landscape and they are often used in Piet Oudolf style plantings. Prefers rich, moist but well-drained soil. Does not tolerate heat and humidity very well. 'Elin' is a cross between the other two species and is not known to seed which gives it an extended bloom time. It gets very tall, 7-9 feet.

|                       |                 |         |    |         |

| Tradescantia | Native | Zone 3-9 |
|--------------|--------|----------|
|--------------|--------|----------|

Common or Ohio Spiderwort, Bluejacket

The grasslike foliage has a blue-gray look. Flowers can be blue, pink, or purple shades. Native from Canada to Florida and west to Texas. It can be an aggressive spreader and self-sows readily. Prefers moist to dry, well-drained, sandy, acidic soils in full to partial sun but can tolerate a wide variety of soil conditions. Drought tolerant.

| Vernonia | Zone 4-9 |
|----------|----------|
|----------|----------|

Ironweed

This is an upright perennial that typically grows 2-4' tall on stiff, leafy stems which branch at the top. Narrow, linear to lance-shaped leaves up to 5" long have serrated margins. Flowers give way to rusty seed clusters. Blooms late summer to fall. Their purple flowers contrast nicely with the bright yellow of *Solidago* blooms. Excellent pollinator plants.

The *lettermannii* species of Ironweed is sometimes called Smooth Ironweed. Generally grows taller in moist soils. The Summer Series are Chicagoland Grows® introductions selected for better performance and disease resistance.

|                                   |                   |        |         |

| Veronica | Zone 4-8 |
|----------|----------|
|----------|----------|

Speedwell

'Blue Sprite' (PP# 29,581) is a groundcover type of *Veronica*. It was introduced by Chicagoland Grows®. 'Kiss the Sky' (PP# 31,665) and 'Spike' (PP# 27,814) are upright forms from Brent Horvath of Intrinsic Perennial Gardens. The Skyward™ Series from Darwin Perennials features high flower counts on compact, mildew-resistant plants with a very long bloom time. Great pollinator plants.

| Adam’s Needle |  |
|---------------|---|

*Yucca filamentosa* is a native evergreen shrub from the sand dunes and beaches of South Carolina and Florida, that has adapted well to more northerly climates. The Adam’s Needle common name refers to the tall flower stalk with bell shaped flowers. The variegated foliage of the ‘Color Guard’ cultivar gives this variety year-round interest. The other varieties have various shades of blue leaves. ‘Sapphire Skies’ is a tree-type *Yucca* with a globe of baby blue leaves coming from a crown on the central trunk.

| Golden Alexanders |   |
|-------------------|---|

Yellow flowers in late spring and early summer have a long bloom time. The small flowers on the large heads are particularly useful for short-tongued pollinators. Native to the Eastern and Southern US. A food plant for the Woodland Swallowtail Butterfly (*Papilio joanae*) and others. Can be a short-lived perennial but will self-seed and persist in a native planting.

# Twixwood Sales Yard

Twixwood Nursery maintains a Sales Yard at our main location for local (and sometimes not so local) customers who enjoy the one-stop shop experience. The Yard is stocked with a wide selection of Perennials, Groundcovers, Grasses, and Shrubs. We stock with a focus on popular items and our best looking Bud and Bloom, providing a small snapshot of what is available from our other farm locations. Many landscapers have designed for their jobs while shopping the Sales Yard and left with what they needed the same day.

Contact your local sales rep for more details on current yard availability. Walk-ins are always welcome.

## Terms & Conditions

THIS LIST CANCELS ALL OTHERS.

### **PRICES**

All prices are F.O.B. Berrien Springs, Michigan. All advance orders are booked subject to prices and availability at the time of shipment. Prices are subject to change without notice.

### **CREDIT ACCOUNTS**

Orders are accepted on a cash, company check (personal or third party checks may not be accepted), or credit card basis only, unless a confidential credit application has been submitted and approved by Twixwood Nursery. Terms for approved credit applicants are Net 30 to customers with established credit. Allow 4-6 weeks for processing the credit application. First orders for all new customers are by pre-payment only. A surcharge of 1.5% per month (18% per year) will be applied to unpaid accounts after terms from date of shipment. Payment on account may be applied to finance charges first.

### **DELINQUENT ACCOUNTS**

Accounts not in good standing or significantly past due may have payment terms removed. Payment terms are not automatically reinstated and may require a new credit application process.

### **NON-SUFFICIENT FUND (NSF) CHECKS**

A \$35 charge will be assessed for NSF checks.

### **CREDIT CARDS**

Payment by Visa, Mastercard, and Discover is accepted. Please call the accounting department during normal business hours. Credit card information is not maintained for future use unless a form is filled out and signed by the customer allowing such information to be maintained through the end of the calendar year.

### **CREDIT BALANCES & WRITE OFF AMOUNTS**

Twixwood reserves the right to write off any unclaimed credit balances under \$10 at the end of the calendar year.

**LIMITED WARRANTY\***

We warrant our plants to be true to name and to be in good living condition at the time of shipment. All other warranties are specifically excluded, including but not limited to the warranty of merchantability or fitness for intended use and any warranty regarding future growth. Our warranty is limited to the seven day period immediately after delivery. All liability for incidental and consequential damages are excluded from this limited warranty. The following remedy applies and is your exclusive remedy: Limited warranty claims will be resolved by the replacement of defective plants only. All orders are accepted and shipments made subject to crop conditions and may be cancelled, prorated or changed based on availability at the time of shipment. (See Boxwood/Pachysandra note below.)

**CLAIMS\***

All plants become your property at the time of delivery. Plant claims that are covered by our limited warranty (see above, and Boxwood/Pachysandra note below) must be submitted in writing within 7 days of shipment. All honored claims will be resolved by the replacement of defective plant material only. Replacement plant material will be provided by Twixwood Nursery as soon as production plans permit and will be shipped at cost.

**CHOICE OF LAW FORUM**

It is agreed to by both parties that any contract for sale of goods and services made between Twixwood Nursery, LLC and the buyer is made in Michigan and shall be governed by Michigan law. Any action pertaining to such sale shall be venued in Berrien County, Michigan.

The buyer also agrees that in the event of non-payment of an overdue account, they shall be liable for collection charges, including reasonable attorney fees.

**\*BOXWOOD BLIGHT & PACHYSANDRA**

Twixwood is a participant in the Boxwood Blight Compliance Agreement. Our stock is regularly inspected and is clean. However due to these concerns, all Boxwood sales are final and Twixwood cannot accept returned or refused plants. Pachysandra is a host plant for Boxwood Blight although the blight apparently does not adversely affect the Pachysandra itself. However because of its ability to host the blight, Twixwood may also not accept refused/returned Pachysandra.

*See additional information under the Shipping Information Section*

## **Earned Volume Discounts**

**EARNED VOLUME DISCOUNT PROGRAM**

Twixwood's Volume Discount Program is based on payment history and on purchases of the previous year. To qualify for these volume discounts your account must be kept current and there cannot be any outstanding finance charges. Discounts removed on delinquent accounts are not automatically reinstated.

# **Shipping Information**

## ***FUEL SURCHARGE***

Twixwood reserves the right to add a fuel surcharge to cover costs if the need arises.

## ***ROUTING & SPECIAL REQUESTS***

All deliveries are subject to the scheduling of full trucks to a particular area and are routed according to the most efficient route. We make every effort to meet your requested needs, but we appreciate your understanding that this is not always possible. Please inform your customer service rep of your delivery needs, and any flexibility that will enable us to ship efficiently and keep our prices low for you.

## ***RACKS***

Twixwood primarily delivers on metal rolling racks. Racks are dropped (left on site) only at the discretion of Twixwood and with the understanding that they will be picked up with the next delivery or at another pre-determined time. Extending rack pick up as well as loss or damage to the racks can result in charges up to \$750/rack.

## ***DETENTION FEE***

Twixwood instructs our drivers to assist the customer in getting the plant material to the back of the truck for unloading. We do ask that the unloading be carried out efficiently so the driver can continue on his or her route without delaying other customers. Delays of more than 2 hours on site can result in detention charges up to \$100 per hour.

## ***SHIPPING DAMAGE CLAIMS***

All shipping damage must be noted at the time of receipt of the goods. Note any obvious damage or shortages in writing on the truck driver's invoice/delivery ticket.

***See Previous Pages for Warranty & Damage Claim Information***

## ***DELIVERY NOTIFICATION***

We will attempt to notify you of deliveries one day in advance. Due to safety concerns and trucking regulations it is not always possible for drivers to notify you closer to delivery.

## ***PICKUP***

Twixwood maintains a sales yard beside the main office at 2759 East Shawnee Road, Berrien Springs, Michigan 49103. We attempt to keep it stocked with our better looking and more common items and encourage local wholesale customers to come and shop. To assure availability of specific items, please call and place an order according to the order deadlines noted on the next page. Orders not picked up within 7 days are subject to a restocking fee up to 20%.

**ORDER DEADLINES**

To ensure and maintain efficient and affordable freight and quality plants upon delivery, Twixwood maintains the following order deadlines. While we make every effort to service our customers, outside of these deadlines it does become much more difficult if even possible, at least without additional charges. Trucks are not routed to all areas every day. Your Customer Service Rep can assist you with determining which days are most likely to have full trucks for your area.

All Times are Eastern Standard Time

| <b>Delivery Date</b> | <b>Order Deadline</b> | <b>Additions* Accepted Until**</b> |
|----------------------|-----------------------|------------------------------------|
| Monday               | 1 pm Thursday         | 6 pm Thursday                      |
| Tuesday              | 1 pm Friday           | 6 pm Friday                        |
| Wednesday            | 1 pm Monday           | 6 pm Monday                        |
| Thursday             | 1 pm Tuesday          | 6 pm Tuesday                       |
| Friday               | 1 pm Wednesday        | 6 pm Wednesday                     |

\*Additions to existing orders. Adding new stops to a routed truck may not be possible.

\*\*Additions are only accepted if we have enough time to get them ready and there is enough room on the truck.

**PLANT LABELS & TAGS**

We will put one variety tag in each flat, #1 and larger container. Additional tags may be available for an additional charge. Please notify your customer service representative of additional tag needs. Custom UPC sticker printing is available for an additional charge.

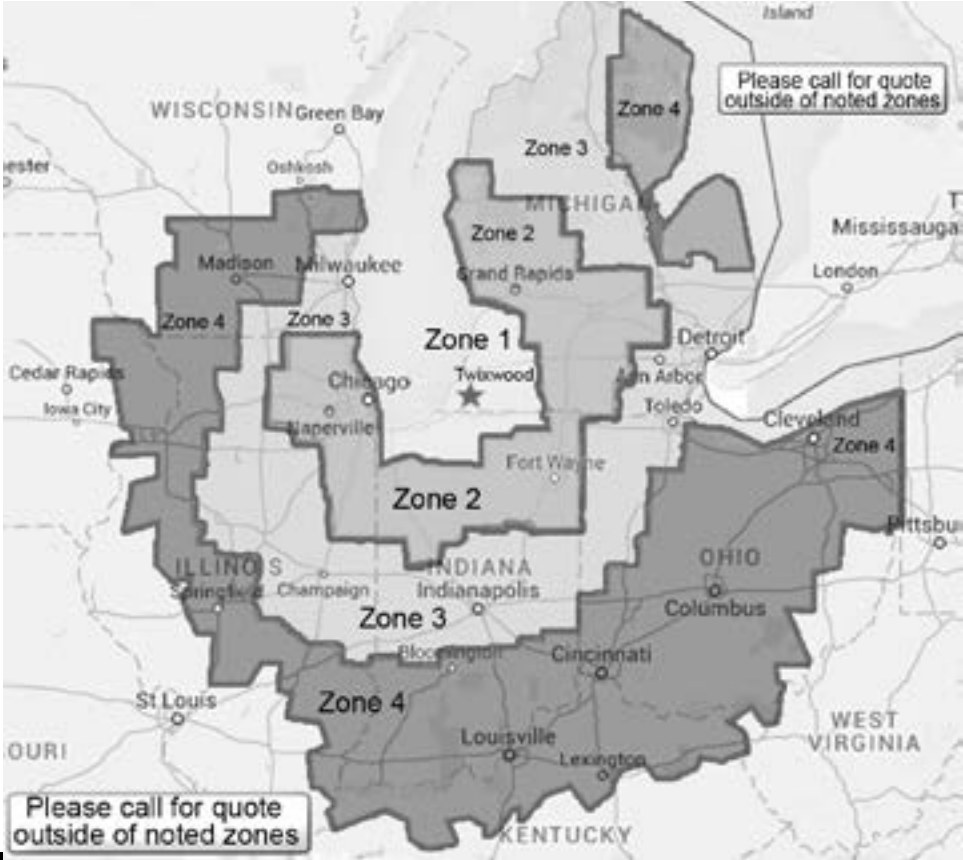

**RESTOCKING\***

Cancellations, adjustments or postponements to orders after the order deadlines noted above can result in restocking fees up to 20% of the order.

\*See previous pages regarding Boxwood Blight & Pachysandra

*See additional information under the Terms & Conditions Section*

# Shipping Zone Map

Information

## Shipping Zones

| Zone | % Charge | Minimum Freight               |
|------|----------|-------------------------------|
| 1    | 6%       | \$100 for Orders Under \$600  |
| 2    | 9%       | \$100 for Orders Under \$600  |
| 3    | 13%      | \$150 for Orders Under \$900  |
| 4    | 17%      | \$250 for Orders Under \$1250 |

Freight percentages calculate on the order subtotal, after earned volume discounts are removed and before tax is added.

Shipping Zone Information Continued From Previous Page

Please refer to the map for shipping zones. Twixwood maps zones by County and Zip Code. Please call for your exact shipping zone.

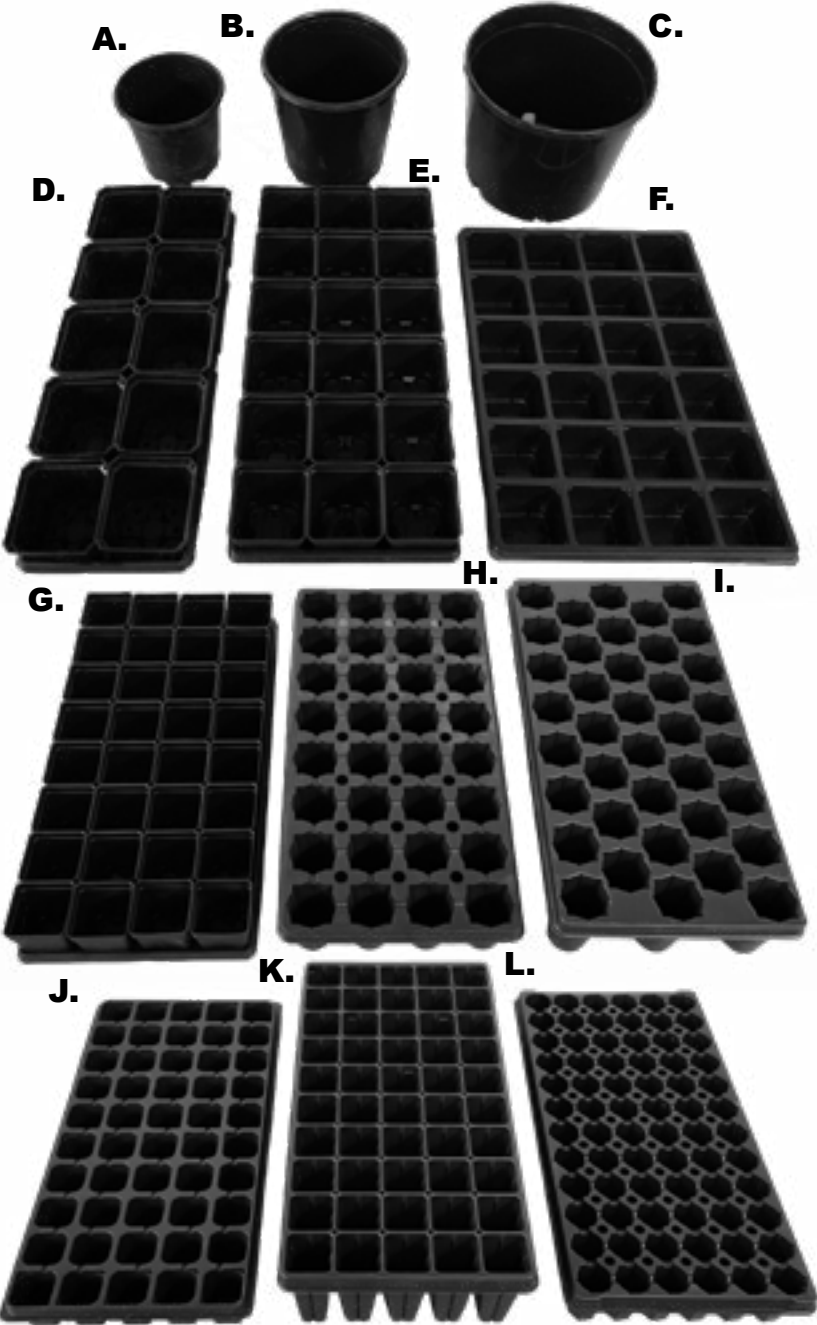

| Zone | % Charge | Minimum Freight               | Key Cities  |
|------|----------|-------------------------------|---|
| 1    | 6%       | \$100 for Orders Under \$600  | <b>Michigan:</b> Holland, Zeeland, Kalamazoo, Dowagiac, Cassopolis, Niles, Saint Joseph, Benton Harbor<br><b>Indiana:</b> South Bend, Elkhart, Goshen, Mishawaka, Portage, Gary, La Porte, Valparaiso, Michigan City  |
| 2    | 9%       | \$100 for Orders Under \$600  | <b>Michigan:</b> Ludington, Lansing, Grand Rapids and Battle Creek<br><b>Indiana:</b> Fort Wayne, Lafayette<br><b>Illinois:</b> Kankakee, Greater Chicago and suburbs, Joliet, Dekalb, Waukegan   |
| 3    | 13%      | \$150 for Orders Under \$900  | <b>Michigan:</b> Traverse City, Saginaw, Bay City, greater Detroit and suburbs, Ann Arbor<br><b>Indiana:</b> greater Indianapolis and suburbs, Terre Haute<br><b>Illinois:</b> Urbana, Champaign, Bloomington, Peoria, Dunlap, Rockford<br><b>Wisconsin:</b> greater Milwaukee and suburbs<br><b>Ohio:</b> Toledo |
| 4    | 17%      | \$250 for Orders Under \$1250 | <b>Indiana:</b> Bloomington, Evansville<br><b>Illinois:</b> Springfield, Galesburg<br><b>Wisconsin:</b> Madison, Fond du Lac<br><b>Ohio:</b> Cleveland, Youngstown, Columbus, Dayton, Cincinnati<br><b>Kentucky:</b> Lexington, Louisville<br><b>Iowa:</b> Davenport, Dubuque                                     |

**All Areas Beyond:** Calculated per order on a truckload, LTL, UPS or Fed-Ex basis.

Once your order minimum is reached (\$500 in Zones 1 & 2, \$750 in Zone 3 and \$1000 in Zone 4), freight will calculate just on the percentage basis, not the percentage plus the minimum. This is an incentive to reach the minimum order amount.

**FedEx:** These delivery zones and rates are based on full trucks. If trucks are not full, or for smaller orders, we may be able to send your order through FedEx and bill you accordingly.

# Package Sizing

# Container Specifications

|   | Size             | Description         | Approximate Dimensions |       |       |               | Legal Volume               |
|---|------------------|---------------------|------------------------|-------|-------|---------------|----------------------------|
|   |                  |                     | Cell                   |       |       | Tray          |                            |
|   |                  |                     | Diam-eter              | Width | Depth |               |                            |
| A | #1               | #1 Pot              | 6.50"                  | round | 6.50" |               | 2.50 qt / 2.37 L / Pot     |

# Map and Directions

**Directions to Twixwood: 2759 East Shawnee, Berrien Springs, MI 49103**

**From Chicago** take I-94 East to Bridgman, Michigan. Take exit #16 (“Red Arrow”), turn right (North) and go to the traffic light. Turn right (East) onto Lake Street and go 8 miles (Lake Street will change to Shawnee Road.) The Nursery is on the left (North) after Garr Road.

**From Indianapolis** take US-31 North of South Bend, Indiana. Take Michigan Exit 13 for Berrien Springs. At the end of the ramp, turn right (West) onto East Snow Road. Go 1.2 miles. Turn right (North) onto Red Bud Trail. Go 1.5 miles. Turn left (West) onto East Shawnee Road. The Nursery is on the right (North), 0.6 miles. The drive is just in front of the big gray barn.

**From Detroit** take I-94 west to exit #33a. Follow the exit ramp onto U.S. 31 South (“South Bend”). Take Berrien Springs exit #15. Turn right (Northwest) and go to the traffic signal. Turn left (South) onto Red Bud Trail. Go 2 miles to the 4-way stop. Turn right (West) onto Shawnee Road. The Nursery is on the right (North), 0.6 miles. The drive is just in front of the big gray barn.
